## Disclaimer:

The numbers in the table below reflect cumulative counts of cases of COVID-19 that are part of an outbreak investigation at, or have the same residential address as a campus or facility that includes a licensed skilled nursing facility (SNF) and/or a personal care home (PCH). Many facilities offer different levels of care at the same location. For example, a rehab facility, skilled nursing facility, and assisted living may all be located on the same campus. From the data received by PA-NEDSS, it is usually not possible to determine which part of the facility the case is associated with. Thus, the case counts in the table may not correctly capture the number of cases within that specific licensed facility. It is also usually not possible from the PA-NEDSS data to determine where the case was when they were exposed or became symptomatic. The original intent of this table was to identify locations that may have cases associated with them and potentially need public health support. Staff numbers reflect cumulative counts of staff members who are a COVID-19 case who reported to a public health investigator that they worked at the facility or campus they are attributed to. Some staff members work at multiple facilities and for the purpose of this report, staff members are attributed to one facility to prevent double counting. The source of the data is indicated as to whether or not it is self-reported by the facility or uses the PA-NEDDS system. \*Indicated less than 5 cases.

## Disclaimer:

The numbers in the table below reflect cumulative counts of cases of COVID-19 that are part of an outbreak investigation at, or have the same residential address as a campus or facility that includes a licensed skilled nursing facility (SNF) and/or a personal care home (PCH). Many facilities offer different levels of care at the same location. For example, a rehab facility, skilled nursing facility, and assisted living may all be located on the same campus. From the data received by PA-NEDSS, it is usually not possible to determine which part of the facility the case is associated with. Thus, the case counts in the table may not correctly capture the number of cases within that specific licensed facility. It is also usually not possible from the PA-NEDSS data to determine where the case was when they were exposed or became symptomatic. The original intent of this table was to identify locations that may have cases associated with them and potentially need public health support. Staff numbers reflect cumulative counts of staff members who are a COVID-19 case who reported to a public health investigator that they worked at the facility or campus they are attributed to. Some staff members work at multiple facilities and for the purpose of this report, staff members are attributed to one facility to prevent double counting.
